ABSTRACT

The Standards for Vocational Home Economics Education were developed to maintain quality and to encourage excellence in vocational home economics education programs at all educational levels among the states and territories of the United States. The Standards are designed to be used by teachers, local supervisors, teacher educators, state staffs, administrators, and others interested in and concerned with developing and/or improving vocational home economics education programs. In the Standards, special attention is given to the following areas: integration of Puture Homemakers of America into the home economics program: elimination of sex bias: accessibility of vocational home economics programs to all persons: development of outreach programs; and consideration of energy, nutrition, and consumer economics. In addition, special populations (the disabled, persons from various cultures, the economically disadvantaged, and single and school-age parents) are emphasized. Standards were developed for seven major areas: philosophy, advisory council, funding, administrative/supervisory staff, instructional staff, instructional program, and curriculum. Nine sets of standards (see note) cover these topics in either consumer and homemaking education or occupational home economics on various educational levels. Each set of Standards contains an explanatory handbook and the Standards for that level. This document covers high school consumer and homemaking education. (KC)

ACKNOWLEDGEMENTS

The project director and principal investigator acknowledge the contributions made by many persons throughout the development of the Standards for Vocational Home Economics Education. The comments and advice from these individuals were utilized in developing and revising the preliminary Standards.

We are especially appreciative of the suggestions made by persons who attended workshops sponsored by the project. Their participation in the developmental process greatly increased the relevance of the Standards. These participants are listed by state or territory in Appendix A of the Handbook.

Members of the project advisory committee were particularly supportive and dedicated to the task of developing the Standards. Many hours of their time were spent reviewing and critiquing drafts of the materials. Very special thanks is extended to this committee. Their names and affiliations are listed beginning on page vii.

Gratitude is expressed to Bertha G. King, Program Specialist for Vocational Home Economics Education, U. S. Department of Education, Office of Vocational and Adult Education. Appreciation is also extended to Frank Perazzoli, Karen Cossaro, and Geraldine Smith, who served as U. S. Department of Education project officers.

Special thanks go to the faculty and staff of the Division of Home Economics Education, The University of Texas at Austin. The support, cooperation, and encouragement of the following persons helped to make these Standards possible: Criss McCuller,

Carol Akkerman Sain, Jean Sutherland, Karen Cotton, Judith Hetherly, Nora Tijerina, Mariam Taha, Mona Foster, Elsa Orozco, and Debbie Jaffe. Finally, without the dedication and perserverance of project research associates Rosemary Wieland and Elizabeth Gray and secretary Chris Wing, this project could not have been completed. Their hard work and committment have made the Standards of the highest quality.

PURPOSE OF THE STANDARDS

Why the Standards were developed.

The Standards for Vocational Home Economics Education
Project was designed to develop standards and a handbook
which together would serve to maintain quality and to
encourage excellence in vocational home economics education
programs at all educational levels among the states and
territories. The project was funded by the United States
Department of Education, Office of Vocational and Adult
Education. A contract to conduct the project was awarded
to the Division of Home Economics Education at The University
of Texas at Austin in September of 1979. The developmental
process is detailed in Appendix B.

Who will use the Standards.

The Standards have been designed to be used by teachers, local supervisors, teacher educators, state staffs, administrators, and others interested in and concerned with developing and/or improving vocational home economics education programs. Although the Standards are intended primarily for use by educators involved in vocational home economics education, they may also be useful in home economics education programs which are seeking to become qualified to receive vocational funds.

How the Standards will be used.

The organization of vocational home economics education programs varies among the states and territories. The purpose of these programs, however, is basically the same: to prepare males and

H-1

females for the occupation of homemaking (unpaid employment) and/or for paid employment in home economics occupations. The Standards have been written for use in evaluating existing programs and in developing new and/or innovative ones. They can also serve as a model to states and territories interested in designing their own standards or revising those currently in use. Although utilization of the Standards is voluntary, it is anticipated that implementation of these Standards for Vocational Home Economics Education will result in articulated programs of high quality at all educational levels among all the states and territories.

How the Standards are being implemented.

At workshops sponsored by the project in the fall of 1980, state and territory representatives developed plans for implementing the Standards. Many of these representatives have subsequently served on steering committees to direct implementation activities, including awareness activities. Presentations about the Standards have been made to teachers at state inservice conferences, to state advisory councils, and to local and state administrators. Some states and territories have prepared news releases and/or articles for professional association newsletters. Others are seeking, or have received, funding to adapt, print, and disseminate the Standards for use in their vocational home economics education programs.

AREAS OF SPECIAL CONCERN WITHIN THE STANDARDS

Areas of special concern were specifically identified in the Request For Proposals for the project and in recent federal legislation as needing greater attention in vocational home economics education programs. In the Standards, special attention is given to the following areas:

- integration of Future Homemakers of America into the vocational home economics education program
- elimination of sex bias and sex stereotyping
- accessibility of vocational home economics education programs to all persons
- development of outreach programs for out-ofschool youths and adults
- consideration of current and future societal concerns, such as energy education/management, nutrition education, and consumer education

Throughout the Standards, these areas of special concern are emphasized. Consideration of these areas in planning, implementing, and evaluating programs and curriculum is encouraged.

In addition, several populations were identified by the advisory committee as needing visibility in the Standards. These were as follows:

- persons with various abilities
- persons from various cultures
- persons with handicapping conditions
- persons from economically depressed areas or areas with high rates of unemployment
- persons identified as disadvantaged
- single parents
- school-age parents

These populations are emphasized where appropriate in the Standards.

COMPONENTS OF A VOCATIONAL HOME ECONOMICS EDUCATION PROGRAM

As work on the Standards progressed, it became evident that inconsistencies existed in the field in the way several key terms were being used. The project staff and the advisory committee realized the need for defining the terms which are specifically used in describing components of a vocational home economics education program. These terms are defined below as they are used in the Standards.

vocational home economics education - the total program of offerings at the local and state levels which is composed of one or both types of instructional programs: consumer and homemaking education (unpaid employment in the occupation of homemaking) and occupational home economics education (paid employment in home economics occupations).

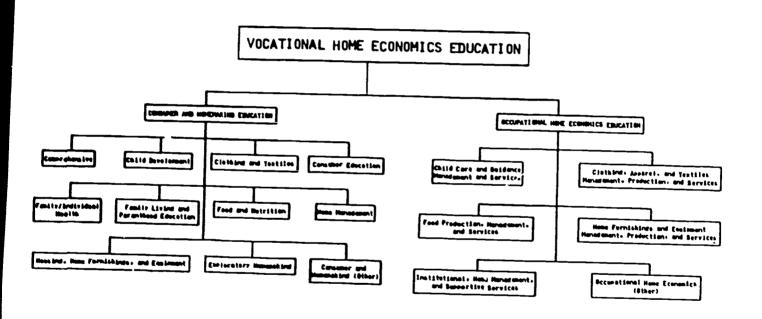

consumer and homemaking education — the instructional program within the total vocational home economics education program which prepares males and females at the elementary through adult educational levels for the occupation of homemaking (unpaid employment).

occupational home economics education - the instructional program within the total vocational home economics education program which prepares males and females at the middle/junior high school through adult educational levels for paid employment in home economics occupations.

(Figure 1 illustrates the way in which these three major terms are interrelated.)

FHA/HERO - the acronym for Future Homemakers of America/ Home Economics Related Occupations. In the Standards,

Figure 1. Vocational Home Economics Education Instructional Programs and Offerings*

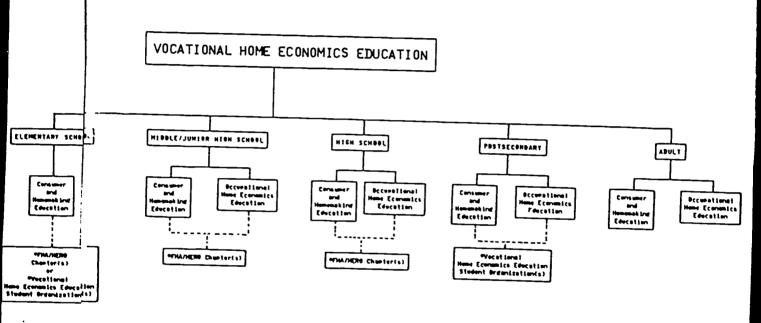

*These groupings and titles are in agreement with <u>A Classification of Instructional Programs</u>, U.S. Department of Education, National Center for Educational Statistics, February 1981.

H-6

FHA/HERO is used when referring to affiliated chapters of the national vocational student organization, Future Homemakers of America. This organization is specifically designed for students enrolled in either instructional program (consumer and homemaking education or occupational home economics education) within the vocational home economics education program. Currently, the national organization primarily serves students in the vocational home economics education program at the middle/junior high school and high school levels, but it is not limited to these students. For elementary and postsecondary levels, a local vocational home economics education student organization may be formed which is not affiliated with any national organization.

(Figure 2 illustrates the way in which student organizations are integral parts of the instructional programs at each educational level.)

Figure 2. Educational Levels with Instructional Programs and Student Organizations

* See Appendix C for definitions

HOW TO USE THE STANDARDS

In order to utilize the Standards properly, it is necessary to become familiar with the format, coding system, and terms used. The format and coding system are explained below and will assist the user in understanding the design of these materials, as well as facilitating use of the Standards in program development, implementation, and evaluation. Appendix C of this Handbook contains definitions of terms as they are used in the Standards.

Standards were developed for seven major topics. These topics are defined below.

Philosophy - The philosophy is defined as a written statement of fundamental beliefs which reflects a value system, serves as a framework for policies and procedures, and is the basis for making program decisions and for establishing program goals and objectives.

Advisory Council - An advisory council is defined as an organized group of persons, usually outside the educational setting, chosen to provide assistance to the vocational home economics education staff.

Funding - Funding is defined as monies provided by local, state, and/or federal sources for conducting the vocational home economics education program.

Administrative/Supervisory Staff - The administrative/ supervisory staff is defined as the vocational home economics education personnel at the local or state level whose primary responsibilities are administering and

supervising programs, services, and activities of the vocational home economics education program and providing leadership to the vocational home economics education instructional staff.

Instructional Staff - The instructional staff is defined as the personnel directly responsible for teaching in the vocational home economics education program.

Instructional Program - The instructional program is defined as consumer and homemaking education offerings or occupational home economics education offerings at each educational level.

Curriculum - The curriculum is defined as that portion of the instructional program which identifies the content of the offerings and the plan for instruction.

Format

The format which evolved during the development of the Standards is systematic, yet it allows for flexibility in implementing the Standards for the various educational levels and both instructional programs. For each topic listed above, Standards were developed for use in the following instructional programs and educational levels within a total vocational home economics education program.

Instructional Program: Consumer and Homemakine Education

Educational Level: Elementary

Middle/Junior High School

High School Postsecondary

Adult

Instructional Program: Occupational Home Economics Education

Educational Level: Middle/Junior High School

High School PostseCondary

Adult

A complete set of Standards is available for each of the educational levels and corresponding instructional programs listed above. As a result, a total of nine sets of Standards were developed through the project. Each set contains a copy of this Handbook.

Within the Standards, a hierarchy consisting of four levels is used. (See Figure 3.) This hierarchy is explained as follows:

Standard - a broad, descriptive statement established by authority (key professionals) and used as a model of qualitative and quantitative characteristics of quality for the voluntary assessment of existing programs and for the development of new programs.

Principle - a descriptive statement of a subtopic within a given Standard.

Criterion - a descriptive statement of a subtopic within a given Principle.

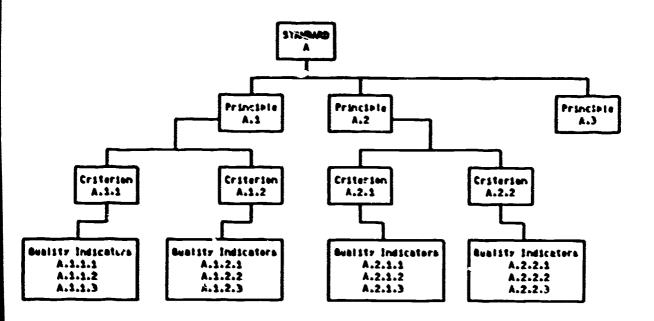

Quality Indicator - a specific description of the components within the Criterion, used to assess the extent to which the Standards are met.

Although the words "standard," "principle," and "criterion" are defined in the dictionary as being synonymous terms, they have been used arbitrarily in the Standards to indicate the hierarchy within each topic.

Figure 3. Hierarchy of the Standards Format

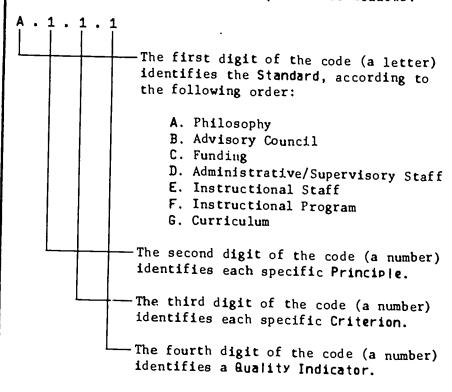

H-13

Coding

To facilitate organization and use of the Standards, a systematic coding system has been devised. Figure 3 illustrates how this coding system appears in the Standards format. The coding system is explained as follows:

USING THE STANDARDS FOR PROGRAM ASSESSMENT

The Quality Indicator Grid

The Quality Indicator section which appears on each page of the Standards is to be used for evaluating or assessing vocational home economics education programs. (See Figure 4.) The possible responses are listed and defined as follows:

Below Standard - satisfies none or only a part of the Quality Indicator

Meets Standard - satisfies the Quality Indicator

Exceeds Standard - surpasses the Quality Indicator

Comments - space provided to clarify responses to the Quality Indicators as needed. Comments should be specific in explaining why responses are made, especially those marked "Below Standard" and "Exceeds Standard." Such comments might be examples of documentation or plans for improvement in order to meet the Standard.

Improvement Analysis Form

It is anticipated that the major uses of the Standards for Vocational Home Economics Education will be in the areas of program development and evaluation. When the need for new instructional programs has been identified, the Standards can be utilized for planning in areas such as curriculum, facilities,

Figure 4. Example of the Quality Indicator Grid

PHILOSOPHY

- STANDARD: A Philosophy The philosophy is developed and utilized in the vocational home economics education program.
 - PRINCEPLE: A.1 Development The philosophy is developed for the vocational home economics education program.
 - CONTENSOR: A.1.1 $\frac{Content}{economics}$ The philosophy states the rationale for the vocational home economics education program.

OLIM ITY			1	ı	H	COMMENTS
MACATORE:	A.1.1.1	The philosophy supports the goals of the vocational home economics education program.				
	A.1.1.2	The philosophy is consistent with other educational philosophies that affect the vocational home aconomics education program.				
	A.1.1.3	The philosophy raflacts the current focus of the field as astablished in statements issued by vocational home aconomics education professional organizations.				
	A.1.1.4	The philosophy reflects the current legislative intent.				
	A.1.1.5	The philosophy raflects social, economic, and cultural needs of the community in context with the focus of vocational home aconomics aducation.				

PHILOBOPHY

All Educational Levels - Vocational Home Economics Education

29

equipment, and instructional staff. In addition, the Standards can be used as a model or guide for developing evaluation criteria and/or assessment instruments.

Appendix D contains a suggested form, the <u>Improvement Analysis</u> <u>Form</u>, which may be used for, or adapted for use in, analyzing deficiencies in order to make program improvements. The first step in the analysis process is evaluating the program using the Quality Indicators for each topic. Responses are made to each Quality Indicator using the grid provided.

Each Quality Indicator which is marked "Below Standard" is written on the Improvement Analysis Form, along with a plan for removing the deficiency. The resources required and a cost estimate are noted, and an anticipated completion date should also be shown. A space is provided for indicating the projected outcome or result and for listing the personnel having primary responsibility for accomplishing the task(s).

Quality Indicators may be prioritized either before or after the analysis is made. Immediate attention is sometimes indicated in certain areas without extensive analysis. In other instances, however, a detailed analysis may be necessary before deficiencies can be prioritized. Individual program goals and objectives should be utilized when prioritizing the deficiencies to be removed.

CONCLUSIONS AND RECOMMENDATIONS

The Standards for Vocational Home Economics Education and the accompanying Handbook are the results of the efforts of many people: members of the project's advisory committee, participants in workshops sponsored by the project, representatives of the U. S. Department of Education, and the project staff. While the Standards and Handbook represent the best efforts of those involved in their development, it is recognized that in time they will need to be revised and updated. The project staff, therefore, recommends that the Standards be reviewed and updated three years after their publication and every five years thereafter. It is imperative to maintain valid Standards if they are to be utilized as intended.

It is also recommended that the United States Department of Education provide funding for a follow-up study of the implementation of the Standards and their impact on vocational home economics education programs in the states and territories. Such a follow-up project should be initiated and directed by the Program Specialist for Vocational Home Economics Education, U. S. Department of Education, Office of Vocational and Adult Education.

Other recommendations resulting from the Standards project include the following:

- expansion of vocational home economics education programs at the elementary, postsecondary, and adult educational levels
- expansion of outreach programs at all educational levels of the consumer and homemaking education instructional program
- expansion of occupational home economics education instructional programs.

APPENDIX B

HOW THE STANDARDS WERE DEVELOPED

In October and November of 1979, the first steps in the project entitled, "Verification and Implementation of Program Standards for Vocational Home Economics Education," were conducted. Copies of existing program standards and handbooks were requested from the states and territories. Analysis of the materials resulted in identification of commonalities and differences among the standards received from the states and territories. A review of the literature was also conducted during this time to gather additional information.

Instrumental in the development of the Standards were members of the project advisory committee. This committee met three times during the course of the project. In addition, advisory committee members assisted the project staff in conducting six regional workshops.

During the spring of 1980, the analysis of existing standards and materials was reviewed by the advisory committee. The project staff utilized suggestions from the advisory committee for developing the Standards and Handbook. As topics were drafted, they were sent to the advisory committee for further critique and review. The committee met to discuss the Standards that had been completed, and consensus was reached on format and wording. The preliminary Standards and Handbook were completed during the summer of 1980.

In September and October of 1980, six regional workshops were held for the purpose of allowing potential users of the Standards and Handbook to review and critique the drafts of the materials. State supervisors of vocational home economics education selected persons to officially represent their

state or territory at the workshops. Additional individuals from the states and territories were also in attendance. Over 500 persons participated in the development of the Standards during the regional workshops. Individuals attending the meetings are listed by state or territory in Appendix C.

A second purpose of the regional workshops was to allow participants to convene by state or territory to develop plans for implementing the Standards in their localities. Members of the advisory committee assisted the project staff at the regional workshops. The workshops were held in Chicago, Boston, Atlanta, San Francisco, Denver, and Dallas.

At the annual meeting of the American Vocational Association in New Orleans during December of 1980, a special working session was held. The purpose of this session was to allow persons who had attended the regional workshops, as well as others who had been unable to attend, to examine and critique changes that had been made in the Standards as a result of suggestions made at the regional workshops.

After the final advisory committee meeting in January of 1981, the Standards and Handbook were completed. When the project officer in the U. S. Department of Education approved the final draft of the Standards, they were sent to the U. S. Government Printing Office for reproduction. The Standards were available for distribution and purchase in the summer of 1981.

APPENDIX C

DEFINITIONS OF TERMS USED IN THE STANDARDS

articulation

a planned developmental progression of tasks and learnings that interrelate each vocational home economics education offering with other vocational home economics education offerings and that interrelate instructional programs at each educational level with instructional programs at all other educational levels. Sometimes may be defined as "scope and sequence."

comprehensive offering

a consumer and homemaking education offering which is comprised of study in all areas of home economics: (1) child development; (2) clothing and textiles; (3) consumer education; (4) family/individual health; (5) family living and parenthood education; (6) food and nutrition; (7) home management (including resource management); and (8) housing, home furnishings, and equipment.

consumer and homemaking education

the instructional program within the total vocational home economics education program which prepares males and females at the elementary through adult educational levels for the occupation of homemaking (unpaid employment).

continuing education activities

educational experiences designed to update the knowledge and skills of participants; may include credit or non-credit offerings or local, state, and/or national inservice activities.

cooperative education

(adapted from PL 94-482) a method of instruction utilized in vocational education for persons who, through written cooperative arrangements between the school and employers, receive instruction, including required academic courses and related vocational instruction by alternation of study in school with a job in any occupational field. These two experiences must be planned and supervised by the school and employers so that each contributes to the education and employability of the student. Work periods and school attendance may be on alternate half days, full days, weeks, or other periods of time in fulfilling the cooperative arrangement.

Criterion

(as used in these Standards) a descriptive statement of a subtopic within a given Principle.

educational levels

- elementary commonly, grades kindergarten through six (actual grades may vary among school districts).
- middle/junior high school commonly, the grades between elementary and high school (actual grades may vary among school districts).
- high school commonly, grades nine through twelve (actual grades may vary among school districts).

40

H-32

- postsecondary (adapted from PL 94-482) vocational education for persons who have completed or left high school and who are enrolled in organized programs of study for which credit is given toward an associate degree or a certificate/license/credential, but which programs are not designed as baccalaureate or higher degree programs.
- adult education (adapted from PL 94-482) vocational education for persons who have completed or left high school and who are not described in the definition of "postsecondary" or who have already entered the labor market or who are unemployed.

educational preparation

completion of approved college courses or participation in approved inservice activities.

exploratory

a process of allowing students to sample a series of activities/offerings which will enable them to make decisions regarding further concentration of study.

extended learning experience

a planned, out-of-class experience which reinforces class learnings and assists in the development of competencies for the occupation of homemaking.

FHA/HERO

the acronym for Future Homemakers of America/Home Economics Related Occupations. The term FHA/HERO is used to identify affiliated chapters of both instructional programs (consumer and homemaking education and occupational home economics education). (See also "Future Homemakers of America.")

Future Homemakers of America

the national vocational student organization which is specifically designed to be an integral part of the curriculum of the vocational home economics education program (consumer and homemaking education and occupational home economics education). Currently, the organization primarily serves students in the vocational home economics education program at the middle/junior high school and high school levels, but service is not limited to these students. Future Homemakers of America is the official title used to identify the overall organization which is composed of FHA/HERO chapters. (See also "FHA/HERO.")

inservice

the educational experience that a person receives after gaining a baccalaureate degree or certificate/license/credential; may include credit or noncredit offerings, workshops, seminars, training programs, or professional association activities.

occupational home economics education

the instructional program within the total vocational home economics education program which prepares males and females at the middle/junior high school through adult educational levels for paid employment in home economics occupations.

45

offering

a planned course, class, service, or activity that is within an instructional program; component(s) of the instructional program.

on-the-job training

the acquisition of technical knowledge and skills in an actual job setting which is supervised; may be paid or unpaid.

outreach offerings

(identified, encouraged, and established in PL 94-482, section 150) special activities within the consumer and homemaking education instructional program which are conducted by teachers or students, using home, school, or community facilities, which meet the particular needs of specific segments of the population who may not ordinarily be included in the regular instructional program.

pre-employment laboratory education

a method of instruction designed to provide technical instruction and supervised simulated work experiences in a laboratory, and/or business/industry setting in order to prepare students for paid employment in home economics occupations.

preservice

the educational preparation that a person receives prior to gaining a baccalaureate degree or certificate/license/credential.

H-35

Principle

(as used in these Standards) a descriptive statement of a subtopic within a given Standard.

Quality Indicator

(as used in these Standards) a specific description of the components within the Criterion, used to assess the extent to which the Standards are met.

specialized offering

an offering whose content emphasizes <u>one</u> of the following areas of consumer and homemaking education: (1) child development; (2) clothing and textiles; (3) consumer education; (4) family/individual health; (5) family living and parenthood education; (6) food and nutrition; (7) home management, including resource management; or (8) housing, home furnishings, and equipment.

Standard

(as used in these Standards) a broad, descriptive statement established by authority (key professionals) and used as a model of qualitative and quantitative characteristics of quality for the voluntary assessment of existing programs and for the development of new programs.

vocational education

(adapted from PL 94-482, section 195) organized educational programs which are directly related to the preparation of individuals for paid or unpaid employment or for additional preparation for a career requiring other than a baccalaureate or advanced degree.

vocational home economics education

the total program of offerings at the local and state levels which is composed of one or both types of instructional programs: consumer and homemaking education (unpaid employment in the occupation of homemaking) and occupational home economics education (paid employment in home economics occupations).

vocational home economics education staff
the combination of the vocational home economics education
instructional and administrative/supervisory staffs.

vocational home economics education student organization any organization formed at the local level (not affiliated with any national organization) to serve students in a vocational home economics education program at the elementary or postsecondary educational level.
